N° 1 savings institution

N° 1 provider of financing to the economy

Key measures deployed to support the economy since the beginning of the crisis

- > **12,000** young entrepreneurs funded¹
- > **41%** of total «INTELAKA» loans granted by the sector
- > **37%** of total «DAMANE OXYGENE» loans granted by the sector¹
- > **35%** of total «DAMANE RELANCE» loans granted by the sector¹

1st player in digital banking and electronic payments in Morocco

% of operations** processed through digital banking

Number of connections on digital platforms (in millions of connections)

[*] Consolidated customer deposits + assets under management + bancassurance assets
[**] Operations available on digital channels: eg: transfers, disposals, payment of invoices.

Attijariwafa bank releases its 2021 FY earnings in a mixed context marked by a strong economic recovery in its main markets but also by various geopolitical and socio-economic uncertainties on a global and regional scale.

STRONG COMMITMENT TO SUPPORTING CLIENTS

In 2021, Attijariwafa bank continued to support and finance households, very small and medium-sized enterprises, large local and regional companies and institutional in its various countries of presence, helping to promote economic recovery.

In Morocco, the support to households and Very Small Enterprises could be illustrated by:

- **Financing 12,000 young entrepreneurs'** projects for an amount of **MAD 2.7 billion** within the "Intelaka" initiative (market share of 41%¹),
- **Disbursement of MAD 8.1 billion of new mortgage loans in FY2021** (+15% and +8% compared to FY2020 and FY2019 respectively) financing access to housing and boosting the real estate sector during this challenging period,
- **Disbursement of MAD 21,5 billion of "Damane" loans** granted to **51,605 enterprises** (market share of 31%¹),
- Disbursement of **MAD 9.0 billion** of "Damane Express", "Damane Attaysir", and "Damane Istitmar" loans financing **18,029 SMEs** (market share of 72%¹);
- Advising and supporting **entrepreneurs and Very Small Enterprises** through Dar Al Moukawil network and digital platform Daralmoukawil.com, generating 2.5 million connections and more than 7 million interaction on social networks.

[1] Market share in number of loans granted to enterprises since the beginning of "Damane" programs.
[2] Adjusted for the cost of contribution to the special Covid-19 fund in 2020.

PROGRESSIVE NORMALIZATION OF EARNINGS

Net banking income grew by **2.2%** (+3.2% at constant exchange rates) to **MAD 24.4 billion**. Net banking income growth was driven by the diversification of Attijariwafa bank's businesses and geographies:

- The Bank in Morocco, Europe and Tangier Offshore Banking Zone: **+5.2%** ;
- International Retail Banking: **+2.5%** (+5.4% at constant exchange rates) ;
- Specialized Finance Subsidiaries: **+4.0%** ;
- Insurance: **-26.3%** as result of the normalization of "automotive" business line claims ratio (after a significant improvement in 2020 related to health measures in Morocco).

Operating income rose **+53.7%** (+29.6%²) to **MAD 9.5 billion** thanks to rigorous **cost control** and to the gradual normalization of **cost of risk** (-33.9%).

Consolidated net income totaled **MAD 6.2 billion up +66.2%** (+38.9%²). Net income (Group share) rose by **+70.5%** (+39.2%²) to **MAD 5.1 billion**.

A ROBUST BALANCE SHEET

In 2021, the bank successfully completed two capital increases through optional conversion of dividends into shares, totaling **MAD 2,1 billion** (+50 bps of CET1). As of December 31st, 2021, Group shareholder equity totaled **MAD 52,5 billion** increasing by **+9.7%**. The consolidated Tier 1 ratio improved from 10.73% in 2020 (10.32% in 2019) to **11.23% in 2021** and Liquidity Coverage Ratio stood at **195%** well above the regulatory minimum of 100% (198% in 2020 and 151% in 2019).

A NEW STRATEGIC PLAN: AMBITIONS2025

Attijariwafa bank launched a new strategic plan **AMBITIONS 2025** in a challenging context marked by radical changes on a global scale (e.g., geopolitical, economic and technological transformations, climate change emergency, changing customer expectations...) leading to new threats and opportunities for the banking industry. **AMBITIONS 2025** has been structured around 3 major ambitions:

- Reinforcing Attijariwafa bank's position as a leading African banking and financial group in order to generate responsible and sustainable growth in its regions of presence and in new territories;
- Positioning Attijariwafa bank as an **innovative, agile** and "**relationship-focused**" bank leveraging on disruptive **digital** and **Big-Data** technologies and on group **synergies**;
- Further alignment with the best international standards in terms of **operational efficiency, risk control and compliance**, to ensure a **sustainable growth**.

The Board of Directors congratulated all the Group's teams for their commitment and their mobilization in favor of customer in a still very challenging environment.

The Board resolved to convene the Ordinary General Shareholders' Meeting, submit for approval the financial statements as of December 31st 2021, and propose a dividend per share of 15 Dirhams.

The Board of Directors
Casablanca, February 22, 2022

FINANCIAL STATEMENTS

Consolidated Accounts at 31 December 2021

ACCOUNTING STANDARDS AND PRINCIPLES APPLIED BY THE GROUP

1.1 Context

Attijariwafa bank's consolidated financial statements have been prepared under International Financial Reporting Standards (IFRS) since first-half 2007 with the opening balance at 1 January 2006. In its consolidated financial statements as of 31 December 2021, the Attijariwafa bank Group has applied the mandatory principles and standards set out by the International Accounting Standards Board (IASB).

1.2 Accounting standards applied

1.2.1 Consolidation principles :

Standard :

The scope of consolidation is determined on the basis of what type of control (exclusive control, joint control or material influence) is exercised over the various overseas and domestic entities in which the Group has a direct or indirect interest.

The Group likewise consolidates legally independent entities specifically established for a restricted and well-defined purpose known as « special purpose entities », which are controlled by the credit institution, without there being any shareholder relationship between the entities. The extent to which the Group exercises control will determine the consolidation method: fully consolidated for entities under the exclusive control of the Group as required by IFRS 10 "Consolidated Financial Statements" or under the equity method for associate companies or joint ventures as required by IFRS 11 "Joint Arrangements" and IAS 28 "Investments in Associates Joint Ventures".

Policies adopted by Attijariwafa bank :

Attijariwafa bank includes entities in its scope of consolidation in which:

- It holds, directly or indirectly, at least 20% of the voting rights (existing or potential);
- The subsidiary's consolidated figures satisfy one of the following criteria:
 - The subsidiary's total assets exceed 0.5% of consolidated total assets;
 - The subsidiary's net assets exceed 0.5% of consolidated net assets;
 - The subsidiary's sales or banking income exceed 0.5% of consolidated banking income.

Specialist mutual funds (UCITS) are consolidated according to IFRS 10 which addresses the issue of consolidation of special purpose entities and in particular funds under exclusive control. Those entities controlled or under exclusive control whose securities are held for a short period of time are excluded from the scope of consolidation.

1.2.2 Fixed assets :

Standard :

Items of property plant and equipment are valued by entities using either the cost model or the revaluation model.

Cost model

Under the cost model, assets are valued at cost less accumulated depreciation.

Revaluation model

On being recognised as an asset, an item of property, plant and equipment, whose fair value may be accurately assessed, must be marked to market.

is the value determined at the time the asset is marked to market less accumulated depreciation.

The sum-of-parts approach breaks down the items of property, plant and equipment into their most significant individual parts (constituents). They must be accounted for separately and systematically depreciated as a function of their estimated useful lives in such a way as to reflect the rate at which the related economic benefits are consumed.

Estimated useful life under IFRS is the length of time that a depreciable asset is expected to be usable.

The depreciable amount of an asset is the cost of the asset (or fair value) less its residual value.

Residual value is the value of the asset at the end of its estimated useful life, which takes into account the asset's age and foreseeable condition.

Borrowing costs

The IAS 23 standard entitled « Borrowing costs » does not allow to recognise immediately as expenses the cost of borrowing directly attributable to acquisition, construction or production of an eligible asset. All the costs of borrowing must be added into the exp.

Policies adopted by Attijariwafa bank :

The Group has opted to use the cost model. The fair value method may be used, however, without having to justify this choice, with an account under shareholders' equity.

Attijariwafa bank has decided against using several depreciation schedules but a single depreciation schedule in the consolidated financial statements under IFRS standards. Under the sum-of-parts approach, the Group has decided to not include those components whose gross value is less than MAD 1000 thousand.

- Historical cost (original cost) is broken down on the basis of the breakdown of the current replacement cost as a function of technical data.

Residual value :

The residual value of each part is considered to be zero except in the case of land. Residual value is applied only to land (non amortisable by nature), which is the only component to have an unlimited life.

1.2.3 Investment property :

Standard :

An investment property is a property which is held either to earn rental income or for capital appreciation or for both. An investment property generates cash flows in a very different way to the company's other assets unlike the use of a building by its owner whose main purpose is to produce or provide goods and services. An entity has the choice between :

The fair value method : if an entity opts for this treatment, then it must be applied to all buildings ;

The cost model

An estimate of the fair value of investment properties must be recorded either in the balance sheet or in the notes to the financial statements. It is only possible to move from the cost method to the fair value method.

Policies adopted by Attijariwafa bank :

All buildings not used in ordinary activities are classified as investment property except for staff accommodation and buildings expected to be sold within a year. The Group's policy is to retain all buildings used in ordinary activities and those leased to companies outside the Group. The historical cost method, modified by the sum-of-parts approach, is used to value investment properties. Information about fair value must be presented in the notes to the financial statements.

1.2.4 Intangible assets :

Standard :

An intangible asset is a non-monetary asset which is identifiable and not physical in nature. An intangible asset is deemed to be identifiable if it:

- Is separable, that is to say, capable of being separated and sold, transferred, licensed, rented, or exchanged, either individually or together with a related contract or;
- Arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.

Two valuation methods are possible:

- The cost method;
- The revaluation model.

This treatment is possible if an active market exists. Amortisation of an intangible asset depends on its estimated useful life. An intangible asset with an unlimited useful life is not amortised but subject to impairment testing at least once a year at the end of the period. An intangible asset with a limited useful life is amortised over the life of the asset. An intangible asset produced by the company for internal use is recognised if it is classified, from the R&D phase, as a fixed asset.

Policies adopted by Attijariwafa bank :

Attijariwafa bank has decided against using several amortisation schedules but a single amortisation schedule in the consolidated financial statements under IFRS/IAS.

Acquisition costs not yet amortised as expenses at 1 January 2006 have been restated under shareholders' equity.

Leasehold rights :

Leasehold rights recognised in the parent company financial statements are not amortised. In the consolidated financial statements, they are amortised using an appropriate method over their useful life.

Business goodwill :

Business goodwill recorded in the parent company financial statements of the different consolidated entities has been reviewed to ensure that the way in which it is calculated is in accordance with IAS/IFRS.

Software :

The estimated useful life of software differs depending on the type of software (operating software or administrative software).

Valuation of software developed in-house: Group Information Systems' Management provides the necessary information to value software developed in-house. In the event that the valuation is not accurate, then the software cannot be recognised as an asset. Transfer fees, commission and legal fees: These are recognised as expenses or at purchase cost depending on their value. Separate amortisation schedules are used if there is a difference of more than MAD 1000K between parent company financial statements and IFRS statements.

1.2.5 Goodwill :

Standard :

Cost of a business combination :

Business combinations are accounted for using the acquisition method according to which the acquisition cost is contingent consideration transferred in order to obtain control.

The acquirer must measure the acquisition cost as:

- The aggregate fair value, at the acquisition date, of assets acquired, liabilities incurred or assumed and equity instruments issued by the acquirer in consideration for control of the acquired company ;
- The other costs directly attributable to the acquisition are recognised through profit or loss in the year in which they are incurred.

The acquisition date is the date at which the acquirer obtains effective control of the acquired company.

Allocation of the cost of a business combination to the assets acquired and to the liabilities and contingent liabilities assumed:

The acquirer must, at the date of acquisition, allocate the cost of a business combination by recognising the identifiable assets, liabilities and contingent liabilities of the acquiree that satisfy the recognition criteria at their respective fair values on that date.

Any difference between the cost of the business combination and the acquirer's share of the net fair value of the identifiable assets, liabilities and contingent liabilities is recognised under goodwill.

Accounting for Goodwill: The acquirer must, at the date of acquisition, recognise the goodwill acquired in a business combination.

- Initial measurement : this goodwill must be initially measured at cost, namely the excess of the cost of the business combination over the acquirer's share of the net fair value of the identifiable assets, liabilities and contingent liabilities.
- Subsequent measurement: following initial recognition, the acquirer must measure the goodwill acquired in a business combination at cost less cumulative impairment subsequent to annual impairment tests or when there is any indication of impairment to its carrying value.

If the share of the fair value of the assets, liabilities and contingent liabilities of the acquired entities exceeds the acquisition cost, negative goodwill is recognised immediately through profit or loss. If initial recognition of a business combination can be determined only provisionally by the end of the reporting period in which the business combination takes place, the acquirer must account for the business combination using provisional values. The acquirer must recognise adjustments to provisional values relating to finalising the recognition within that financial period, beyond which time no adjustments are possible.

Policies adopted by Attijariwafa bank :

- Option taken not to restate the existing goodwill at 12/31/05, in accordance with the provisions of IFRS 1 "First-Time Adoption" ;
- Goodwill amortisation is discontinued when the asset has an indefinite life in accordance with amended IFRS 3 "Business combinations" ;
- Regular impairment tests must be carried out to ensure that the carrying amount of goodwill is below the recoverable amount. If not, an impairment loss must be recognised;
- the Cash Generating Units mirror the segment reporting to be presented at Group level ; these are the banking business and the insurance business ;
- The recoverable amount is the higher of the unit's value in use and its carrying amount less costs of disposal. This is used in impairment tests as required by IAS 36. If an impairment test reveals that the recoverable amount is less than the carrying amount, then the asset is written down by the excess of the carrying amount over its recoverable amount.

1.2.6 Lease contracts :

Standard :

In January 2016, the IASB published IFRS 16, its new accounting standard on leases, which replaced IAS 17 standards and related interpretations. IFRS 16 implementation from January 2019 removes the distinction between "operating lease" and "finance lease". As of now, leases contracts are all accounted in the same way. The leased asset shall be recognized as right-of-use asset and the financing commitment as a lease liability. The right of use is amortized on a straight line bases through P&L, and the lease liability is amortized using the declining balance method over the lease term contract.

Policies adopted by Attijariwafa bank :

Transition According to IASB, IFRS 16 first time application can be done through 2 approaches:

- The full retrospective approach : this approach effectively restates the financial statements as if IFRS 16 had always been applied,
- The modified retrospective approach with 2 options
 - measure the right of use and the lease liability of the remaining lease payments from January 1, 2019 to the lease term (cumulated retrospective approach)
 - measure that right-of-use asset as if IFRS 16 had been applied since the commencement date of the lease and measure the lease liability as the sum of discounted remaining lease payments (simple retrospective approach)

The transition approach elected by Attijariwafa bank group is the modified approach option cumulated retrospective approach. This approach does not generate impact on equity. Therefore, 2018 comparative information has not been restated.

Threshold exemption :

A lessee may elect not to recognize a right-of-use asset and a lease liability to:

- Contracts with term less than 12 months if it does not include a purchase option at the end of the term;
- Contracts with an underlying asset value equal or lower to the limit defined by the lessee. IASB suggested a 5000 kUSD limit. Attijariwafa Bank group elected both exemption types to implement IFRS 17.

Lease term :

Lease term is defined as the period for which the contract is enforceable. A lease is no longer enforceable when the lessee and the lessor each have the right to terminate the lease without permission from the other party with no more than an insignificant penalty.

Enforceable term, or non-cancellable term, can be increased with:

- Optional period of contract renewal where it is reasonably certain that the option will be exercised
- Period following optional periods of contracts renewal where it is reasonably certain that the option will not be exercised.

Lease terms defined by Attijariwafa Bank group are as follows :

Type of leased asset	Lease term
Commercial rental	9 years
Residential rental	3 years
Temporary occupation of public property	20 years
Construction rental	20 years

As for rights of use, the payments to be retained correspond to the initial value of the rental debt, plus initial direct costs, prepayments and restoration costs.

Due to the adoption by the Attijariwafa bank group of the modified retrospective approach, the right of use has been valued, at the time of the first application of IFRS 16, at the value of the rental debt as described above.

• Leases :

According to IFRS 16, the lease payments included in the measurement of the lease liability comprise the following payments:

- Fixed lease payments.
- Variable lease payments that depend on an index or a rate.
- Amounts expected to be payable by the lessee under residual value guarantees.
- The exercise price of a purchase option if the lessee is reasonably certain to exercise that option.
- Payments of penalties for terminating the lease, if the lease term

reflects the lessee exercising an option to terminate the lease.

The cost of the right-of-use asset shall comprise the amount of the initial measurement of the lease liability increased by initial direct costs, payments made in advance, and restoring the underlying asset costs. As Attijariwafa Bank group elect the modified retrospective method, the right-of-use has been evaluated for the first-time application as the lease liability as defined above.

• Discount rate :

The lease payments used to estimate the right-of-use or the lease liability shall be discounted using one of the following rates:

- The implicit interest rate in the lease i.e. the rate of the lease contract.
- If that rate cannot be readily determined, the lessee shall use the lessee's incremental borrowing rate i.e. the rate of interest that a lessee would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right-of-use asset.

The discount rate chosen by Attijariwafa Bank to evaluate is lease contract is the incremental borrowing rate. This rate rely on 3 components :

- Reference rate
- Risk premium
- Individual adjustment from the lease contract.

1.2.7 Financial assets and liabilities – Classification and measurement:

Standard :

Classification

Classification Financial assets, except those related to insurance activities, are classified in the following 3 accounting categories :

- Amortised cost
- Fair value through other comprehensive income ("FVOCI")
- Fair value recognized in profit and loss ("FVPL")

The classification of a financial asset in one of these three categories is based on the following criteria:

- type of the asset held (debt or equity instrument);
- for debt instruments on the basis of both (i) contractual cash flows of the asset (SPPI: solely payment of principal and interest) and (ii) the business model defined by the company. The business models are based on how the company manages its financial assets to generate cash flows and create value.

Debt instruments

This standard distinguishes three business models :

- "hold to collect" model: assets managed to collect contractual cash flows;
- "hold to sell" model: assets managed to sell the financial assets;
- "mixed" model: assets managed to collect contractual cash flows and sell the financial asset

The allocation of debt instruments to one of these models is made on the basis of how the groups of financial instruments are managed collectively in order to determine the economic objective. The identification of the economic model is not made instrument by instrument, but rather at the portfolio level of financial instruments, particularly through the analysis and observation of:

- the measurement method, monitoring and risk management associated with the financial instruments concerned;
- realized and expected asset sales (size, frequency, type).

Equity instruments

Investments in equity instruments are classified as "financial assets at fair value through profit or loss" or as " Non recyclable equity at fair value". In this last case, when securities are sold, unrealized gains and losses previously recognized in equity will not be recognized through profit or loss will not be recognized in profit or loss.

Only dividends will be recognized in profit or loss.

Investments in mutual funds do not meet the definition of equity instruments as they are puttable to the issuer. They do not meet the cash flow criterion either, and thus are recognized at fair value through profit or loss.

Measurement

Assets at amortised cost

The amortised cost of a financial asset or liability is the amount at which this instrument was first recognised :

- reduced by capital reimbursements
- increased or reduced by the amortization accumulated calculated by the effective interest rate method, by any difference between this initial amount and the amount of reimbursement at maturity.
- Reduced by all the cuts for depreciation or no recoverability. This calculation should include all the fees and other amounts paid or received directly attributable to credits, transaction fees and every valuation haircut or premium.

Assets valued at fair value through profit or loss

In accordance with IFRS 9, financial assets or liabilities at fair value through profit or loss are assets or liabilities acquired or generated by the business primarily for the purpose of making a profit related to short-term price fluctuations or arbitrating margin.

All derivative instruments are financial assets (or liabilities) at fair value through profit or loss except when designated as hedges.

Securities classified as financial assets at fair value through profit or loss are measured at fair value and variations in fair value are recognized in profit or loss.

This class of securities is not subject to impairment.

Assets valued at fair value through equity

This class of securities relates to the debt instruments of the investment portfolio and the long-term debt instruments held.

Variations in the fair value of securities (positive or negative) classified as "Assets at fair value through equity" are recorded in equity (Recyclable).

The depreciation over time of the potential increase / decrease in fixed income securities is recognized in the income statement using the effective interest rate method (actuarial spread).

Borrowings and deposits :

When initially recognised, a deposit or borrowing classified under IFRS in "Other financial liabilities" must be initially measured in the balance sheet at fair value plus or minus:

- transaction costs (these are external acquisition costs directly attributable to the transaction) ;
- fees received constituting professional fees that represent an integral part of the effective rate of return on the deposit or borrowing.

Deposits and borrowings classified under IFRS as "Other financial liabilities" are subsequently measured at the end of the reporting period at amortised cost using the effective interest rate method (actuarial rate).

Deposits classified under IFRS as "Liabilities held for trading" are subsequently measured at fair value at the end of the reporting period. The fair value of the deposit is calculated excluding accrued interest.

A deposit or borrowing may be the host contract for an embedded derivative. In certain circumstances, the embedded derivative must be separated from the host contract and recognised in accordance with the principles applicable to derivatives. This analysis must be done at the inception of the contract on the basis of the contractual provisions.

Policies adopted by Attijariwafa bank :

Loans and receivables The Group's policy is to apply the cost model to all loans maturing in more than one year as a function of their size. Loans maturing in less than one year are recorded at historical cost.

Borrowings: Borrowings and deposits are classified under different categories including « Financial liabilities », « Trading liabilities » and « Liabilities accounted for under the fair value option ».

Deposits :

Sight deposits :

Attijariwafa bank applies IFRS 13. T

he fair value of a sight deposit cannot be lower than the amount due on demand. It is discounted from the first date on which the repayment may be demanded.

Interest-bearing deposits:

- Deposits bearing interest at market rates
- the fair value is the nominal value unless transaction costs are significant. A historical record of 10-year bond yields needs to be kept to be able to justify that the rates correspond to the original market rates.
- Deposits bearing interest at non-market rates
- the fair value is the nominal value plus a discount.

Savings book deposits :

The rate applied is regulated for the vast majority of credit institutions. Accordingly, no specific IFRS accounting treatment is required for savings book deposits.

Deposits must be classified under the «Other liabilities » category.

Portfolio classification

Attijariwafa bank and other entities excluding insurance companies

SPPI debt instruments held in portfolios are classified according to the following principles:

Assets at FVPL	Debt instruments at FVOCI	Debt instruments at depreciated cost
<ul style="list-style-type: none">• Trading and dealing Room portfolios	<ul style="list-style-type: none">• Negotiable treasury bills classified in the Investment Portfolio• Bonds and other negotiable debt securities	<ul style="list-style-type: none">• Treasury Bills

Securities lending/borrowing and repurchase agreements :

Securities temporarily sold under repurchase agreements continue to be recognised in the Group's balance sheet in the category of securities to which they belong. The corresponding liability is recognised under the appropriate debt category except in the case of repurchase agreements contracted by the Group for trading purposes where the corresponding liability is recognised under "Financial liabilities at fair value through profit or loss". Securities temporarily acquired under reverse repurchase agreements are not recognised in the Group's balance sheet. The corresponding receivable is recognised under "Loans and receivables" except in the case of reverse repurchase agreements contracted by the Group for trading purposes, where the corresponding receivable is recognised under "Financial assets at fair value through profit or loss".

Treasury shares :

The term "treasury shares" refers to shares issued by the consolidating company, Attijariwafa bank. Treasury shares held by the Group are deducted from consolidated shareholders' equity. Gains and losses arising on such instruments are also eliminated from the consolidated profit and loss account.

1.2.8 Financial assets and liabilities – Impairment:

Standard :

IFRS 9 introduces a new model for recognizing impairment of financial assets based on expected credit losses (ECL). This new model is applicable to financial assets measured at amortized cost or at fair value through other comprehensive income; The new model represents a change from the current IAS 39 model on the basis of incurred credit losses.

Assessment of increase in credit risk: The new standard outlines a "three-stage" model. The allocation of a financial asset to one of these three stage (or "buckets") is made on the basis of whether a significant rise in credit risk has occurred since initial recognition.

- Bucket 1 (Performing loans): no significant increase in credit risk since initial recognition;
- Bucket 2 ("Loans with a significant increase in credit risk"): significant increase in credit risk since initial recognition. There is also, according to the standard, a rebuttable presumption that the credit risk of an instrument has significantly increased since initial recognition when the contractual payments are more than 30 days past due;
- Bucket 3 (Non performing loans): incurred credit/default event.

The amount of impairment and the basis for application of an effective interest rate depend on the bucket to which the financial asset is allocated.

The approach of expected credit losses under IFRS 9 is symmetrical, meaning that if expected credit losses at maturity have been recognized in a previous closing period, and if it turns out that there is no longer a significant increase in the credit risk for the financial instrument and for the current closing period since its initial recognition, the provision is again calculated on the basis of a credit loss expected at 12 months discounted with the effective interest rate of the exposure.

Measurement of expected credit losses

Expected credit losses are defined as an estimate of credit losses (i.e. the present value of all cash shortfalls) weighted by the probability of occurrence of these losses over the expected life of financial instrument. They are measured on an individual basis, for all exposures.

The amount of expected losses is determined by means of three principal factors : the probability of default (PD), the loss given default (LGD) and the exposure at default (EAD) taking into account the amortization profiles. Expected losses are calculated as the product of PD by LGD and EAD discounted at the effective interest rate of the exposure.

- Probabilities of Default (PD): the PD represent the likelihood of a borrower defaulting on its financial obligation either over the next 12 months or over the remaining lifetime of the obligation
- Exposure at Default (EAD): EAD is based on the amounts the group expects to be owed at the time of default, over the next 12 months or over the remaining lifetime.
- Loss Given Default (LGD) : LGD represents the group's expectation of the extent of loss on a defaulted exposure. LGD varies by type of counterparty, type and seniority of claim and availability of collateral or other credit support. LGD is expressed as a percentage loss per unit of exposure at the time of default. LGD is calculated on a 12-month of lifetime basis, where 12 month LGD is the percentage of loss expected to be made if the default occurs over the remaining expected lifetime of the loan.

Policies adopted by Attijariwafa bank :

Monitoring of risk degradation

The assessment of the significant increase in credit risk is based primarily on the internal credit risk rating system implemented by the Group, as well as on the monitoring of sensitive receivables and overdue payments. In addition, there is, according to the standard, a rebuttable presumption of a significant increase in the credit risk associated with a financial asset since initial recognition in the event of unpaid loans of more than 30 days.

Definition of Default

The definition of default is aligned with the criteria adopted by BAM in its circular n°19/G/2002. This definition is also the one used by the group in its internal management.

Measurement of expected credit losses

The Attijariwafa bank group has developed statistical models, specific to each of its entities, to calculate expected losses on the basis of:

- Credit rating systems ,
- Historical default occurrences,
- Historical data relating to recovery of non-performing loans;
- Information about non-recurring loans available to loan recovery units for relatively significant amounts;
- Guarantees and pledges held.

1.2.9 Derivatives and Embedded derivatives :

Derivatives

Standard :

A derivative is a financial instrument or another contract included in IFRS 9's scope of application which meets the following three criteria:

- Its value changes in response to a change in a variable such as specified interest rate, the price of a financial instrument, a price, index or yield benchmark, a credit rating, a credit index or any other variable, provided that in the case of a non-financial variable, the variable must not be specific to any one party to the contract (sometimes known as «the underlying »);
- Requires no initial investment or one that is smaller than would be required for a contract having a similar reaction to changes in market conditions; and
- Is settled at a future date.

A hedging instrument is a designated derivative or, in the case of a hedge for foreign exchange risk only, a non-derivative designated financial asset or liability. The latter's fair value or cash flows are intended to offset variations in the fair value or cash flows of the designated hedged item.

Policies adopted by Attijariwafa bank :

Attijariwafa bank does not currently use derivatives for hedging purposes and is not therefore subject to provisions applicable to hedge accounting.

All other transactions involving the use of derivatives are recognised as assets/liabilities at fair value through income.

Embedded derivatives :

Standard :

An embedded derivative is a feature within a financial contract whose purpose is to vary a part of the transaction's cash flows in a similar way to that of a stand-alone derivative.

The IFRS 9 standard defines a hybrid contract as a contract comprising a host contract and an embedded derivative.

Where the host contract is a financial asset, the entire hybrid contract is measured at fair value through profit or loss because its contractual cash flows do not pass the SPPI test.

Where the host contract is a financial liability, the embedded derivative is separated from its host contract and accounted for as a derivative when the following three conditions are met:

- The hybrid contract is not recognised at fair value;
- Separated from the host contract, the embedded derivative possesses the same characteristics as a derivative;
- The characteristics of the embedded derivative are not closely related to those of the host contract.

IFRS 9 recommends that the host contract is valued at inception by taking the difference between the fair value of the hybrid contract (i.e. at cost) and the fair value of the embedded derivative.

Policies adopted by Attijariwafa bank :

If there is a material impact from measuring embedded derivatives at fair value, then they are recognised under «Financial assets held at fair value through income ».

1.2.10 Insurance

Insurance contracts :

The treatment of contracts qualifying as insurance contracts within the meaning of the definition given by IFRS 4 and of investment contracts with discretionary participation features is governed by IFRS 4, the main provisions of which are summarized below:

May continue to recognise these contracts in accordance with current accounting policies by making a distinction between three types of contract under IFRS 4:

1. Pure insurance contracts;
2. Financial contracts comprising a discretionary participation feature;
3. And liabilities relating to other financial contracts, in accordance with IAS 39, which are recorded under «Amounts owing to customers ».
 - Requires that embedded derivatives, which do not benefit from exempt status under IFRS 4, are accounted for separately and recognised at fair value through income;
 - Requires a test for the adequacy of recognised insurance liabilities and an impairment test for reinsurance assets;
 - A reinsurance cession asset is amortised, by recognising this impairment through income, when and only when:
 - Tangible evidence exists, following the occurrence of an event after initial recognition of the asset in respect of reinsurance cessions, resulting in the cedant not receiving all its contractual cash flows;
 - This event has an impact, which may be accurately assessed, on the amount which the reinsurer is expected to receive from the primary insurer.
 - Requires an insurer to keep insurance liabilities on its balance sheet until they are discharged, cancelled, or expire and prohibits offsetting insurance liabilities against related reinsurance assets;
 - Requires that a new insurance liability is recorded in accordance with IFRS 4 «Shadow accounting » in respect of policyholders' deferred participation in profits which represents the portion of unrealised capital gains on financial assets to which policyholders are entitled, in accordance with IAS 39.

Investment-linked insurance

On September 12, 2016, the IASB published amendments to IFRS 4, "Insurance contracts" entitled "Application of IFRS 9 Financial Instruments and IFRS 4 Insurance contracts". These amendments are applicable for the financial years open as of January 1, 2018. These amendments give entities that are primarily engaged in insurance activities the ability to defer until January 1, 2023 the date of application of IFRS 9. This deferral allows entities to continue to present their financial statements in accordance with IAS 39. This temporary exemption from application of IFRS 9, which is limited to groups the IASB's amendments, has been extended by Bank Al-Maghrib to the insurance entities consolidated by institutions of credit producing consolidated financial statements in accordance with the chart of accounts for credit institutions.

Options taken by Attijariwafa bank :

Insurance contracts :

A liability adequacy test has already been carried out by Wafa Assurance, which appointed an external firm of actuaries to assess its technical reserves. The provision for fluctuations in claims relating to non-life insurance contracts is to be cancelled.

Investment-linked insurance :

Attijariwafa bank opted for this exemption to the insurance entities, including the funds belonging to this activity, which thus applied the IAS 39 standard "Financial instruments: recognition and measurement".

The instruments held in portfolios are currently classified in the following categories :

HFT	AFS	HTM	Loans & receivables
<ul style="list-style-type: none"> • Portfolio of consolidated UCITS 	<ul style="list-style-type: none"> • Shares and other equity • Investments in SCIs (Panorama) ; • Treasury bills and unquoted debt instruments. 	<ul style="list-style-type: none"> • Not applicable 	<ul style="list-style-type: none"> • Long-term investments

1.2.11 Fair value :

IFRS 13 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction on the principal (or most advantageous) market at the measurement date under current market conditions (i.e., an exit price), whether the price is directly observable or estimated by means of another measurement technique.

IFRS 13 establishes a fair-value hierarchy that categorizes into three levels the inputs to valuation techniques used to measure fair value. The fair-value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1 inputs) and the lowest priority to unobservable inputs (Level 3 inputs).

Level 1 inputs

Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date. A quoted price in an active market provides the most reliable evidence of fair value and is used without adjustment to measure fair value whenever available, with limited exceptions (see § 79).

Level 2 inputs

Level 2 inputs are inputs other than quoted market prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified maturity (contractual), a Level 2 input must be observable for almost the entire life of the asset or liability. Level 2 inputs include:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in markets that are not active;
- Inputs other than quoted prices that are observable for the asset or liability, for example, interest rates and yield curves observable at commonly quoted intervals, implied volatilities, credit spreads.

Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the following: the state or location of the asset, the extent to which inputs relate to items that are comparable to the asset or liability, as well as the volume and the level of activity in the markets within which the inputs are observed.

An adjustment to a Level 2 input that is significant to the entire measurement might result in a fair value measurement categorised within Level 3 of the fair value hierarchy if the adjustment uses significant unobservable inputs.

Level 3 inputs

Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs must be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, i.e. an exit price at the measurement date from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk.

Market value is determined by the Group:

- Either from quoted market prices in an active market;
- Or by using a valuation technique based on mathematical models derived from recognised financial theories, which makes maximum use of market inputs :

➔ Case 1: Instruments traded on active markets

Quoted market prices on active markets are the best evidence of fair value and should be used, where they exist, to measure the financial instrument. Listed securities and derivatives such as futures and

options, which are traded on organised markets, are valued in this way. The majority of over-the-counter derivatives, such as plain vanilla swaps and options, are traded on active markets. They are valued using widely-accepted models (discounted cash flow model, Black and Scholes model and interpolation techniques) and based on quoted market prices of similar or underlying instruments.

➔ **Case 2: Instruments traded on inactive markets**

Instruments traded on an inactive market are valued using an internal model based on directly observable or deduced market data. Certain financial instruments, although not traded on active markets, are valued using methods based on directly observable market data. Observable market data may include yield curves, implied volatility ranges for options, default rates and loss assumptions obtained by market consensus or from active over-the-counter markets.

Transfer :

Transfers between levels of the hierarchy can occur when instruments meet the criteria for classification in the new level, as these criteria are dependent on market and product conditions. Changes in observability, the passage of time and events affecting the life of the instrument are the main factors that trigger transfers. Transfers are deemed to have been made at the beginning of the period.

During fiscal 2019, there were no transfers between the levels of fair value.

1.2.12 Liabilities provisions

A provision must be booked when :

- the company has a present obligation (legal or implicit) resulting from a past event.
- it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation ; and
- the amount of the obligation can be reliably estimated. If these conditions are not satisfied, no provision may be recognised. Under IFRS, when the outflow of expected future economic benefits exceeds one year, it is compulsory to discount the provisions for risks and charges.

Except in the case of combinations, contingent liabilities are not provisioned.

When the contingent liability or asset is material, it is compulsory to mention it in the notes to the financial statements.

1.2.13 Employee benefits

Standard :

The objective of this Standard is to prescribe the accounting treatment and disclosure for employee benefits. This Standard shall be applied by an employer in accounting for all employee benefits, except those to which IFRS 2 "Share-based Payment" applies.

These benefits include those provided:

- Under formal plans or other formal agreements between an entity and individual employees, groups of employees or their representatives;
- Under legislative requirements, or through industry arrangements, whereby entities are required to contribute to national, state, industry or other multi-employer plans; or
- By those informal practices that give rise to a constructive obligation and those where the entity has no realistic alternative but to pay employee benefits.

Employee benefits are contingent considerations of any type provided by an entity for services rendered by members of staff or in the event that their employment is terminated.

They comprise 4 categories :

Short-term benefits :

Are employee benefits (other than termination benefits), that are expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related services e.g. wages, salaries and social security contributions; paid annual leave and paid sick leave; profit-sharing and bonuses etc.

When an employee has rendered service to an entity during an accounting period, the entity shall recognise the undiscounted amount of short-term employee benefits expected to be paid in exchange for that service:

- As a liability, after deducting any amount already paid, if applicable; or
- As an expense.

Post-employment benefits :

These are employee benefits which are payable post-employment e.g. retirement benefits, post-employment life insurance and post-employment medical care.

Distinction is made between two types of post-retirement benefit plan:

1. Defined contribution plans: an entity pays defined contributions into a fund and has no other legal or constructive obligation to pay additional contributions if the fund does not have sufficient assets to meet expected benefits relating to services rendered by staff. As a result, actuarial risk and investment risk fall on the employee. Accounting for defined contribution plans is straightforward because no actuarial assumptions are required to measure the obligation or the expense and there is no possibility of any actuarial gain or loss. The entity shall recognise the contribution payable to a defined contribution plan in exchange for the service rendered by an employee:

- As a liability, after deducting any amount already paid, if applicable; or
- As an expense.

2. Defined benefit plans: the entity's obligation is to provide the agreed benefits to current and former employees. As a result, actuarial risk and investment risk fall on the employee.

Accounting for defined benefit plans is quite complex due to the fact that actuarial assumptions are required to measure the obligation and there is a possibility of an actuarial gain or loss. In addition, the obligations are discounted to their present value as they may be paid several years after the employee has rendered the corresponding service.

A multi-employer plan which is neither a general plan nor a compulsory plan must be recognised by the company as either a defined contribution plan or a defined benefit plan depending on the characteristics of the plan.

Other long-term employee benefits :

Other long-term employee benefits include long-term paid absences, such as long-service or sabbatical leave. They also include jubilee or other longservice benefits such as wissam schoghl, long-term disability benefits, profitsharing, bonuses and deferred remuneration if not expected to be settled wholly before twelve months after the end of the annual reporting period.

In general, the measurement of other long-term employee benefits is usually not subject to the same degree of uncertainty as the measurement of defined benefit plans. Therefore, this standard provides a simplified method which does not recognise re-measurements in other comprehensive income.

Termination benefits :

Termination benefits are employee benefits payable as a result of either an entity's decision to terminate an employee's employment before the normal retirement date or an employee's decision to accept voluntary redundancy in exchange for those benefits.

The entity should recognise a liability and expense for termination benefits at the earlier of the following two dates:

- The date after which it may no longer withdraw its benefits;
- The date at which it recognises the costs of restructuring as required by IAS 37 and envisages the payment of related benefits.

In the case of termination benefits payable following an entity's decision to terminate the employment of an employee, the entity may no longer withdraw its offer of benefits once it has informed the employees in question of the termination plan, which should satisfy the following criteria:

- The measures required to successfully execute the plan would suggest that it is unlikely that major changes would be made to the plan;
- The plan identifies the number of employees to be terminated, the job classifications or functions that will be affected and their locations and when the terminations are expected to occur;
- The plan establishes the terms of the termination benefits in sufficient detail to enable employees to determine the type and amount of benefits they will receive if they are involuntarily terminated.

Measuring obligations :

Method :

Accounting for defined benefit plans requires the use of actuarial techniques to reliably estimate the benefits accruing to employees in consideration for current and past service rendered.

This requires estimating the benefits, demographic variables such as mortality rates and staff turnover, financial variables such as the discount rate and future salary increases that will affect the cost of benefits.

The recommended method under IAS 19 is the "projected unit credit method".

This amounts to recognising, on the date that the obligation is calculated, an obligation equal to the probable present value of the estimated benefits multiplied by the length of service at the calculation date and at the retirement date.

The obligation can be considered as accruing pro-rata to the employee's length of service. As a result, an employee's entitlement is calculated on the basis of length of service and estimated salary at the retirement date.

Policies adopted by Attijariwafa bank :

Attijariwafa bank has opted for a defined contribution retirement benefits plan. Accordingly, no specific accounting treatment is required under IFRS.

In the case of post-employment medical cover, Attijariwafa bank does not have sufficient information to be able to account for its medical cover as a defined benefit plan.

The Group, on the other hand, has booked specific provisions for liabilities to employees including end-of-career bonuses and service awards (Ouissam Achoughl).

1.2.14 Share-based payments

Share-based payments are payments based on shares issued by the Group. The payments are made either in the form of shares or in cash for amounts based on the value of the Group's shares. Examples of share-based payments include stock options or employee share plans.

Under the subscription terms, employees may subscribe for shares at a discount to the current market price over a specified period. The inaccessibility period is taken into consideration when expensing this benefit.

6.3 Capital and income per share

6.3.1 Number of shares and per values :

As of 30 December 2021, Attijariwafa bank's capital amounted to MAD 2,151,408,390 and made of 215,140,839 shares at a nominal value of MAD 10.

6.3.2 Attijariwafa bank shares held by the Group :

As of 31 December 2021, Attijariwafa bank Group hold 13,226,583 shares representing a global amount of MAD 2,461 million deducted from the consolidated shareholders equity.

6.3.3 Per share income :

The bank has not dilutive instruments in ordinary shares. Therefore, the diluted income per share is equal to the basic income per share.

(IN MAD)

(MAD)	12/31/2021	12/31/2020
Earnings per share	23.91	14.38
Diluted earnings per share	23.91	14.38

6.3.4 Increase in share capital by conversion (full or partial) into shares of dividends for the year ended December 31,2020:

On May 27 2021 , the Extraordinary General Meeting authorizes a capital increase for a maximum amount of MAD 891,903,635.75 (including share premium), open to all Company shareholders to be paid up exclusively by optional total or partial conversion of dividends into shares (the "Capital Increase"). The Extraordinary General Meeting determines that only the amount of dividends with, as applicable, taxes and other withholdings deducted in accordance with the tax code and double taxation treaties concluded with Morocco, shall be applied to new shares subscribed by individuals or entities. Shareholders shall have preemptive subscription right to the Capital Increase. The Extraordinary General Meeting determines that if subscriptions have not absorbed the full amount of the Capital Increase, the amount of the Capital Increase may be limited to the amount of subscriptions effectively carried out

FINANCIAL STATEMENTS

Parent company financial statements at 31 December 2021

1. Presentation

Attijariwafa bank is a Moroccan company governed by common law. The financial statements comprise the accounts of head office as well as branches in Morocco.

2. General principles

The financial statements are prepared in accordance with generally accepted accounting principles applicable to credit institutions.

The presentation of Attijariwafa bank's financial statements complies with the Credit Institution Accounting Plan.

3. Loans and signature loans

General presentation of loans

- Loans and advances to credit institutions and customers are classified according to their initial maturity and type:
 - Sight and term loans in the case of credit institutions;
 - Short-term loans, equipment loans, consumer loans, mortgage loans and other loans for customers.
- Signature loans accounted for off-balance sheet relate to transactions which have not yet given rise to cash movements such as irrevocable commitments for the undrawn portion of facilities made available to credit institutions and customers or guarantees given;
- Repo transactions, involving shares or other securities, are recorded under the different loan categories (credit institutions or customers);
- Interest accrued on these loans is recorded under related loans and booked to the income statement.

Non-performing loans on customers

- Non-performing loans on customers are recorded and valued in accordance with prevailing banking regulations.

The main measures applied are summarised as follows:

- Non-performing loans are classified as sub-standard, doubtful or impaired depending on the level of risk;

After deducting the guarantee portion as required by prevailing regulations, provisions for non-performing loans are made as follows:

- 20% for sub-standard loans;
- 50% for doubtful loans;
- 100% for impaired loans.

- Provisions made relating to credit risks are deducted from the asset classes in question. As soon as loans are classified as non-performing, interest is no longer accrued but is recognised as income when received;
- Losses on irrecoverable loans are booked when the possibility of recovering the non-performing loans is deemed to be zero;
- Provisions for non-performing loans are written-back on any positive development in respect of the non-performing loans in question, such as partial or full repayment or a restructuring of the debt with partial repayment.
- The bank has written off non-performing loans using provisions set aside for this purpose.

4. Amounts owing to credit institutions and customers

Amounts owing to credit institutions and customers are presented in the financial statements according to their initial maturity and type:

- Sight and term borrowings in the case of credit institutions;
- Current accounts in credit, savings accounts, terms deposits and other customer accounts in credit in the case of customers.

Repo transactions, involving shares or other securities, are recorded under the different loan categories (credit institutions or customers), depending on the counterparty;

Interest accrued on these loans is recorded under related borrowings and booked to the income statement.

5. Securities portfolio

5.1. General presentation

Securities transactions are booked and valued in accordance with the Banking chart of accounts.

Securities are classified as a function of their legal characteristics (debt security or equity security) and the purpose for which they are acquired (trading securities, available-for-sale securities, investment securities and investments in affiliates).

5.2. Trading securities

Trading securities are securities which are highly liquid and are acquired with the intention of being resold in the very near future. These securities are recorded at cost (including coupon). At the end of each period, the difference between this value and their market value is recognised directly in the income statement.

5.3. Available-for-sale securities

Available-for-sale securities are securities acquired with the intention of being held for at least 6 months, except for fixed income securities intended to be held until maturity. AFS securities comprise all securities that do not satisfy the criteria required to be classified in another category.

Debt securities are booked excluding accrued interest. The difference between their purchase price and redemption price is amortised over the security's remaining life.

Equities are recorded at cost less acquisition expenses.

At the end of each period, a provision for impairment is made for any negative difference between a security's market value and carrying amount. Unrealised gains are not booked.

5.4. Investment securities

Investment securities are debt securities which are acquired, or which come from another category of securities, with the intention of being held until maturity for the purpose of generating regular income over a long period.

These securities are recorded at cost less acquisition expenses. The difference between their purchase price and redemption price is amortised over the security's remaining life.

At the end of each period, these securities are recorded at cost, regardless of their market value. Unrealised profit or loss is therefore not recognised.

5.5. Investments in affiliates

This category comprises securities whose long-term ownership is deemed useful to the Bank.

At the end of each period, their value is estimated on the basis of generally accepted criteria such as useful value, share of net assets, future outlook for earnings and share price. Only unrealised losses give rise to provisions for impairment on a case-by-case basis.

5.6. Repos with physical delivery

- Repo securities are maintained on the assets side and continue to be valued according to the rules applicable to their category. The amount received and the interest on the debt are recorded as liabilities.
- Securities received on reversal repo transaction are not recorded as assets on the balance sheet. The amount disbursed and the interest accrued on the receivable are recorded as assets.

6. Foreign currency transactions

Foreign currency loans, amounts owing and signature loans are translated into dirhams at the average exchange rate prevailing on the balance sheet date.

Any foreign exchange difference on contributions from overseas branches and on foreign currency-denominated borrowings for hedging exchange rate risk is recorded in the balance sheet under "Other assets" or "Other liabilities" as appropriate. Any translation difference arising on translation of

long-term investment securities acquired in a foreign currency is recorded as a translation difference for each category of security in question.

Any foreign exchange difference on any other foreign currency account is posted to the income statement. Income and expenses in foreign currency are translated at the exchange rate prevailing on the day they are booked.

7. Translation of financial statements drawn up in foreign currencies

The «closing rate» method is used to translate foreign currency- denominated financial statements.

Translation of balance sheet and off-balance sheet items

All assets, liabilities and off-balance sheet items of foreign entities are translated at the exchange rate prevailing on the balance sheet date.

Shareholders' equity (excluding net income for the current period) is valued at different historical rates. Any difference arising on restatement (closing rate less historical rate) is recorded in shareholders' equity under «Translation differences».

Translation of income statement items

All income statement items are translated at the average exchange rate over the year except for depreciation and amortisation expenses, which are translated at the closing rate.

8. General provisions

These provisions are made, at the discretion of the management, to address future risks which cannot be currently identified or accurately measured relating to the banking activity.

Provisions made qualify for a tax write-back.

9. Intangible assets and property, plant and equipment

Intangible assets and property, plant and equipment are recorded in the balance sheet at cost less accumulated depreciation and amortisation, calculated using the straight line method over the estimated use life of the assets in question.

Intangible assets are categorised as operating or non-operating assets and are amortised over the following periods:

Type	Amortisation period
- Lease rights	not amortised
- Patents and brands	N/A
- Research and development	N/A
- IT software	6.67 years
- Other items of goodwill	5 years

Tangible assets are categorised as operating or non operating assets and are amortised over the Following periods :

Type	Amortisation period
- Land	not depreciated
- Operating premises	25 years
- Office furniture	6.67 years
- IT hardware	6.67 years
- Vehicles	5 years
- Fixtures, fittings and equipment	6.67 years

10. Deferred expenses

Deferred expenses are expenses which, given their size and nature, are likely to relate to more than one period.

Deferred expenses are amortised over the following periods:

Type	Amortisation period
-Start-up costs	3 years
- Expenses incurred in acquiring fixed assets	5 years
- Bond issuance expenses	N/A
- Premiums paid on issuing or redeeming debt securities	N/A
- Other deferred expenses	3-5 years on a case by case basis

11. Recognition of interest and fees in the income statement

Interest

Income and expenses calculated on principal amounts actually lent or borrowed are considered as interest.

Income and expenses calculated on a prorata temporis basis which remunerate a risk are considered as similar income or expenses. This category includes fees on guarantee and financing commitments (guarantees, documentary credits etc.).

Interest accrued on principal amounts actually lent or borrowed is booked under related loans or debt with an offsetting entry in the income statement entry.

Similar income or expenses are recorded under income or expenses when invoiced.

Fees

Income and expenses, calculated on a flat-rate basis for a service provided, are recorded under fees when invoiced.

12. Non-recurring items of income and expenditure

They consist exclusively of income and expenses arising on an exceptional basis and are, in principle, rare in that they are unusual in nature or occur infrequently.
